Java Quick Reference

Accessible methods from the Java library that may be included in the exam

Clace	Constructors	and	Mothodo
Class	Constructors	and	Methods

Explanation

Class Collsti detois and Methods	LAPIANATON		
	String Class		
String(String str)	Constructs a new String object that represents the same sequence of characters as str		
<pre>int length()</pre>	Returns the number of characters in a String object		
String substring(int from, int to)	Returns the substring beginning at index from and ending at index to - 1		
String substring(int from)	Returns substring(from, length())		
<pre>int indexOf(String str)</pre>	Returns the index of the first occurrence of str; returns -1 if not found		
boolean equals(String other)	Returns true if this is equal to other; returns false otherwise		
int compareTo(String other)	Returns a value <0 if this is less than other; returns zero if this is equal to other; returns a value >0 if this is greater than other		
	Integer Class		
Integer(int value)	Constructs a new Integer object that represents the specified int value		
Integer.MIN_VALUE	The minimum value represented by an int or Integer		
Integer.MAX_VALUE	The maximum value represented by an int or Integer		
<pre>int intValue()</pre>	Returns the value of this Integer as an int		
	Double Class		
Double(double value)	Constructs a new Double object that represents the specified double value		
double doubleValue()	Returns the value of this Double as a double		
	Math Class		
<pre>int abs(int x)</pre>	Returns the absolute value of an int value		
double abs(double x)	Returns the absolute value of a double value		
double pow(double base, double exponent)	Returns the value of the first parameter raised to the power of the second parameter		
double sqrt(double x)	Returns the positive square root of a double value		
<pre>double random()</pre>	Returns a double value greater than or equal to 0.0 and less than 1.0		
	ArrayList Class		
int size()	Returns the number of elements in the list		
boolean add(E obj)	Appends obj to end of list; returns true		
<pre>void add(int index, E obj)</pre>	Inserts obj at position index (0 <= index <= size), moving elements at position index and higher to the right (adds 1 to their indices) and adds 1 to size		
E get(int index)	Returns the element at position index in the list		
E set(int index, E obj)	Replaces the element at position index with obj; returns the element formerly at position index		
E remove(int index)	Removes element from position index, moving elements at position index + 1 and higher to the left (subtracts 1 from their indices) and subtracts 1 from size; returns the element formerly at position index		
	Object Class		
boolean equals(Object other)			
String toString()
